

CO-VID-19 Shutdown Protocols / Recommendations For HUDSON Underwater Treadmill Systems

- 1) Shut off power at disconnect
- 2) Drain the water storage tank
- 3) Shop vac the bottom of exercise chamber (under the treadmill belt)
- 4) Spray and wipe down inside of exercise chamber with surface disinfectant including bottom pan
 - a. Recommended Pro Vet Logic which can be purchased at our online store:
<https://www.hudsonaquatic.com/product-category/chemicals/page/2/>
 - b. All surfaces that come in contact with water can be sprayed and let sit if can't wipe down ie: inside belt, pump baskets, filter canister and jets
- 5) In applicable models, leave treadmill upright in standing position to allow air dry inside belt
- 6) Leave the door open for air circulation
- 7) Remove filter cartridge and clean
- 8) Shop vac pump basket area out on all pumps
- 9) Shop vac jets in exercise chamber to remove standing water in the pipes
- 10) Shop vac filter canister and inlet/outlet ports inside filter canister to remove as much water as possible from the plumbing lines
- 11) Either shop vac water out of the bottom of the water storage tank using an extension.....OR.....sprinkle a little bit of granular chlorine into leftover water in the bottom of water storage tank.

*****Do not enter the water storage tank for cleaning. This is not recommended and not safe – chlorine gas may be present.
